

**1. General information****Course:** PRINCIPLES OF BUILDING MATERIALS**Type:** BASIC**Degree:** 315 - UNDERGRADUATE DEGREE IN BUILDING ENGINEERING**Center:** 308 - SCHOOL POLYTECHNIC OF CUENCA**Year:** 1**Main language:** Spanish**Use of additional languages:****Web site:** <http://campusvirtual.uclm.es/>**Code:** 59305**ECTS credits:** 6**Academic year:** 2019-20**Group(s):** 30**Duration:** First semester**Second language:****English Friendly:** Y**Bilingual:** N**Lecturer:** DAVID SANZ MARTINEZ - Group(s): 30

Building/Office	Department	Phone number	Email	Office hours
Escuela Politécnica de Cuenca 1.12 // Facultad de Educación de Cuenca 0.06 //	INGENIERÍA GEOLÓGICA Y MINERA	926053056; Ext:2642	david.sanz@uclm.es	The tutoring schedule will be published in the CampusVirtual and on the bulletin board.

2. Pre-Requisites

Given the time that is available for a development of the subject at a level that implies use of it by the future Building Engineer, cannot be based on a total ignorance of Chemistry and Geology, also taking into account, that the basic knowledge of both subjects is taught during several years of pre-university education. In this sense, participation in the initiation course (Zero-Course _earlier sept) is recommended; the knowledge will be checked with an initial level test. For all these reasons, it will be required, as minimum knowledge, that the student must possess to pass this subject and that they can be examined at any time, all those corresponding to the High School Education, which can be obtain from any textbook of this course and the precedents. An initial level of English is convenient.

3. Justification in the curriculum, relation to other subjects and to the profession

The incorporation of Chemistry and Geology, as essential materials in the training of technicians in construction and building has been a logical process, growing and irreversible. Like other subjects that did not figure in the old educational plans of the technical schools, these subjects have been incorporated into the nucleus of the engineers' training. They come to fill a void that the business community demanded due to the increasing technification of their teams, in which there are usually no technicians trained to understand professional advisors of geology and / or chemistry.

It is, for them, evident that both the construction materials and the very deep excavations of the current and future buildings represent a worrying facet in the construction. The profession has accepted this demand in the new restructuring of the studies.

4. Degree competences achieved in this course**Course competences**

Code	Description
E04	Knowledge of the chemical characteristics of the materials used in constructions, their manufacturing processes, the methodology of the tests to determine their characteristics, their geological origin, environmental impact, recycling and waste management.
G01	Ability for analysis and synthesis
G02	Organization and planning ability
G04	Problem resolution
G06	Critical thinking
G08	Teamwork in an interdisciplinary environment
G12	Autonomous learning
G21	Command of Information and Communication Technologies (ICT)
G22	Correct oral and written communication

5. Objectives or Learning Outcomes**Course learning outcomes****Description**

To systematize the processes, minerals and rocks corresponding to its genesis, and not by an arbitrary commercial gazetteer.

To relate the chemical concepts with the minerals, rocks and materials of artificial origin of more frequent use, as well as to know the ores of the metals and other industrial materials

You will know the reactivity of construction materials against different external agents and their relationship with potential pathological processes.

Know the relationship between the origin and application of the materials, and the scientific and technical nomenclature for their action in a multidisciplinary team; and, secondarily, to obtain initial training for a later specialization.

Application of chemical and geological knowledge in the environmental impact as well as in the recycling of construction materials, supporting the management and treatment of waste from construction activities.

Acquire the foundations of anti-seismic regulations, key in the construction; and be able to read a geological map, its report and interpret a general geological cut.

To become familiar with the work in the laboratory leading to the identification and analysis of the materials or their components. To do this, the methodology of the tests for determining the characteristics of construction materials must be known.

As a working tool, the specialized contents of the computer network will be used.

6. Units / Contents

Unit 1: Overview of construction materials.

Unit 1.1 Introduction. Overview of existing resources.

Unit 2: Fundamentals of chemistry.

Unit 2.1 Basic concepts of chemistry: Atomic structure and chemical bonding. Elements and substances..

Unit 2.2 States of matter aggregation. Solutions, colloids and suspensions.

Unit 2.2 Water. Physical and chemical properties.

Unit 2.3 Chemical reactions - stoichiometry - properties: acid-base, oxidation-reduction and precipitation reactions.

Unit 2.4 Practice 1.- Laboratory practices and tests. Learning and use of material, acid-base, gravimetric and redox evaluations.

Unit 3: Fundamentals of geology

Unit 3.1 The mineral as structure and composition: crystalline matter, chemical classification and physical properties of minerals.

Unit 3.2 Practice 2.- Identifying minerals of interest for the building-construction.

Unit 3.3 Genetic classification of rocks and the petrological cycle: igneous, sedimentary and metamorphic rocks: their applications and properties.

Unit 3.4 Practice 3.- Identifying types of rocks of interest for the building-construction.

Unit 3.5 Geological mapping

Unit 3.6 Practice 4.- Understanding & Interpreting a Geologic Map

Unit 3.7 Geological risks in construction. Exogenous and endogenous risks. Fundamentals of seismology.

Unit 4: Processing of construction materials. Basic properties and environment.

Unit 4.1 Natural stones. Physical, chemical and mechanical properties.

Unit 4.2 Practice 5.- Determination of physical and mechanical properties of stone materials.

Unit 4.3 Materials and environment. Waste management and environmental implications.

7. Activities, Units/Modules and Methodology

Training Activity	Methodology	Related Competences (only degrees before RD 822/2021)	ECTS	Hours	As	Com	R	Description
Class Attendance (theory) [ON-SITE]	Lectures	E04 G01 G06 G08 G21	1.4	35	N	-	-	Presentation in the classroom of the concepts and general principles of the geological and chemical sciences, using the participatory master lesson method.
Problem solving and/or case studies [ON-SITE]	Problem solving and exercises	E04 G01 G02 G04	0.2	5	N	-	-	Exercises solving in a participatory way in the classroom.
Other off-site activity [OFF-SITE]	Problem solving and exercises	E04 G01 G02 G04	1	25	N	-	-	Self-solving exercises.
Laboratory practice or sessions [ON-SITE]	Practical or hands-on activities	E04 G02 G06 G21	0.5	12.5	Y	Y	N	Realization of laboratory practices. Realization, delivery and exhibition of laboratory report.
Other on-site activities [ON-SITE]	Assessment tests	E04 G01 G02 G04 G06 G08 G12 G21 G22	0.24	6	Y	N	Y	Realization of assessment tests and problems of the basic conceptual aspects of each of the main topics. To be able to make mediation with the evaluation of other activities, it is necessary to have a minimum score of 4.5 out of 10.
Group tutoring sessions [ON-SITE]	Group Work	E04 G01 G02 G04 G06 G08 G12 G21 G22	0.06	1.5	N	-	-	Group or individual tutorials.
Study and Exam Preparation [OFF-SITE]	Self-study	E04 G01 G02 G04 G06 G08 G12 G21 G22	2.6	65	N	-	-	Self-study
Total:			6	150				
Total credits of in-class work: 2.4			Total class time hours: 60					
Total credits of out of class work: 3.6			Total hours of out of class work: 90					

As: Assessable training activity

Com: Training activity of compulsory overcoming

R: Rescheduling training activity

8. Evaluation criteria and Grading System

Evaluation System	Grading System		Description
	Face-to-Face	Self-Study Student	
Practicum and practical activities reports assessment	50.00%	0.00%	Delivery and defense of a practice report according to established guidelines. Work will not be picked up if it does not meet these characteristics. For this, attendance at two tutorials (on the dates specified) of the group on the work will be mandatory. Quality of work and presentation will be valued. To be able to make media with the evaluation of other activities (assessment tests) it is necessary to have a minimum score of 4.5 out of 10.

Test	50.00%	0.00%	Assesment tests of the basic conceptual aspects of each of the main topics (topic 2, 3 and 4). To be able to make mediation with the evaluation of other activities (memory defense practices) it is necessary to have a minimum score of 4.5 out of 10 in each of the tests.
Total:	100.00%	0.00%	

Evaluation criteria for the final exam:

For the final exam, the qualification obtained in the preparation of the practical's report will be maintained, provided that the grade is greater than or equal to 4.5. The student can only recover the qualification obtained in the evaluation part of the assessment tests.

Specifications for the resit/retake exam:

For the final exam, the qualification obtained in the preparation of the practical's report will be maintained, provided that the grade is greater than or equal to 4.5. The student can only recover the qualification obtained in the evaluation part of the assessment tests.

9. Assignments, course calendar and important dates	
Not related to the syllabus/contents	
Hours	hours
Unit 1 (de 4): Overview of construction materials.	
Activities	Hours
Class Attendance (theory) [PRESENCIAL][Lectures]	2
Group 30:	
Initial date: 27/09/2019	End date: 28/09/2019
Unit 2 (de 4): Fundamentals of chemistry.	
Activities	Hours
Class Attendance (theory) [PRESENCIAL][Lectures]	13
Problem solving and/or case studies [PRESENCIAL][Problem solving and exercises]	2
Other off-site activity [AUTÓNOMA][Problem solving and exercises]	10
Laboratory practice or sessions [PRESENCIAL][Practical or hands-on activities]	3
Other on-site activities [PRESENCIAL][Assessment tests]	2
Group tutoring sessions [PRESENCIAL][Group Work]	.5
Study and Exam Preparation [AUTÓNOMA][Self-study]	22
Group 30:	
Initial date: 26/09/2019	End date: 23-10-2019
Unit 3 (de 4): Fundamentals of geology	
Activities	Hours
Class Attendance (theory) [PRESENCIAL][Lectures]	12
Laboratory practice or sessions [PRESENCIAL][Practical or hands-on activities]	6.5
Other on-site activities [PRESENCIAL][Assessment tests]	2
Group tutoring sessions [PRESENCIAL][Group Work]	.5
Study and Exam Preparation [AUTÓNOMA][Self-study]	22
Group 30:	
Initial date: 24-10-2019	End date: 27-11-2019
Unit 4 (de 4): Processing of construction materials. Basic properties and environment.	
Activities	Hours
Class Attendance (theory) [PRESENCIAL][Lectures]	8
Problem solving and/or case studies [PRESENCIAL][Problem solving and exercises]	3
Other off-site activity [AUTÓNOMA][Problem solving and exercises]	15
