#### 2. Pre-Requisites

Any prerequisites are established. Documentation and bibliography in English could be facilitated.

## 3. Justification in the curriculum, relation to other subjects and to the profession

At the master's level and in the field of health sciences, it is necessary to consolidate the scientific method. Thus, it is necessary to manage the two main methodological approaches to answer research questions in the field of health: the qualitative methodology and the quantitative methodology. Finally, the student must be able to effectively handle the tools of the statistical methodology, and apply them to the computer processing of data in the health sciences.

| 4. Degree cor | npetences achieved in this course  |
|---------------|--|
| Course compe  | tences   |
| Code          | Description  |
| CB06          | Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas often in a research context.   |
| CB07          | Apply the achieved knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to the area of study   |
| CB08          | Be able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on social and ethical responsibilities linked to the application of knowledge and judgments  |
| CB09          | Know how to communicate the conclusions and their supported knowledge and ultimate reasons to specialized and non-specialized aud non-specia |
| CB10          | Have the learning skills which allow to continue studying in a self-directed or autonomous way   |
| CE10          | To know how to apply the most appropriate multivariate statistical procedure to complex data in the health and social care field.  |
| CE11          | To know how to prepare a pertinent, rigorous and feasible research proposal that responds to a priority research problem in the health and social care field.  |

#### 5. Objectives or Learning Outcomes

#### **Course learning outcomes**

#### Description

The student will be able to select, based on the research question, if the most appropriate approach is the qualitative or quantitative one.

The student will be able to select the appropriate statistical techniques for the exploratory, descriptive, multivariate and inferential analysis of complex data.

The student will be able to interpret and obtain practical conclusions from the analysis of the data.

The student will be able to know the appropriate techniques to summarize and graphically represent the data of a study.

The student will be able to analyze complex data with the IBM SPSS and EPIDAT statistical packages.

#### 6. Units / Contents

Unit 1: Health research designs (quantitative, qualitative and mixed designs).

Unit 1.1 Coding and data analysis.

Unit 1.2 Statistical inference: confidence intervals and hypothesis contrast.

Unit 1.3 Regression and simple and multiple correlation.

Unit 1.4 Logistic regression.

Unit 1.5 Survival analysis.

Unit 1.6 Results presentation.

## 7. Activities, Units/Modules and Methodology

| 7. Activities, Units/Modules and M             | Methodology                                     | 1   |      |       |    |                              | _   |  |  |

## 8. Evaluation criteria and Grading System

|   | Grading      | System                |   |
|---|--------------|-----------------------|---|
| Evaluation System                                 | Face-to-Face | Self-Study<br>Student | Description   |
| Self Evaluation and Co-evaluation                 | 15.00%       | 10.00%                | Active participation in online forums and debates will be assessed.   |
| Final test  | 80.00%       | 10 00%                | Multiple-choice test test with 4 answer options of about 30 questions, with a duration of about 40 minutes. |
| Assessment of problem solving and/or case studies | 5.00%        | 10.00%                | Active participation in the problems and clinical cases raised during the course will be assessed.          |
| Total   | : 100.00%    | 0.00%                 |   |

#### Evaluation criteria for the final exam:

The ordinary evaluation will have a final numerical mark between 0 and 10 according to the current Spanish legislation in force. It is necessary the participation of the student in at least 80% of the sessions to pass the subject. The evaluation of on-line activities and the resolution of problems and / or cases will suppose a 20% of the qualification, and 80% the score obtained in a final test with multiple-choice test.

#### Specifications for the resit/retake exam:

In this call the student must examine the contents of the subject not approved in the ordinary call.

## Specifications for the second resit / retake exam:

In this call the student must examine all the contents of the program, regardless of whether they have passed or not before.
