**2. Pre-Requisites**

To have a general knowledge on mathematics, mechanics and graphic expression.

**3. Justification in the curriculum, relation to other subjects and to the profession**

The Resolución of 15 January of 2009, BOE of 29 January (Orden CIN / 351/2009, 9 February, BOE of 20 February 2009) establishes the requirements that must meet the new degree titles so that habilitate in the exercise of the profession of Technical Industrial Engineer.

This is a common subject of the Mechanical specialty in which students are initiated in the study of elastic solids. In the previous semester the subject of "Materials resistance" is studied, where the analysis of stresses and deformations of structural components subjected to fixed loads in time are studied, while in the current subject the theory of the elasticity and its applications to any type of solid are presented.

**4. Degree competences achieved in this course****Course competences**

| Code | Description   |
|------|---|
| A01  | To understand and have knowledge in an area of study that moves on from the general education attained at secondary level and usually found at a level that, while supported in advanced text books, also includes some aspects that include knowledge found at the cutting edge of the field of study. |
| A02  | To know how to apply knowledge to work or vocation in a professional manner and possess the competences that are usually demonstrated by the formulation and defence of arguments and the resolution of problems in the field of study.   |
| A04  | To be able to transmit information, ideas, problems and solutions to a specialized audience.  |
| A07  | Knowledge of Information Technology and Communication (ITC).  |
| A08  | Appropriate level of oral and written communication.  |
| A09  | Ethical and professional commitment.  |
| A12  | Knowledge of basic materials and technologies that assist the learning of new methods and theories and enable versatility to adapt to new situations.   |
| A13  | Ability to take the initiative to solve problems, take decisions, creativity, critical reasoning and ability to communicate and transmit knowledge, skills and abilities in Mechanical Engineering.   |
| C08  | Knowledge and use of the principles of the resistance of materials.   |
| CB01 | Prove that they have acquired and understood knowledge in a subject area that derives from general secondary education and is appropriate to a level based on advanced course books, and includes updated and cutting-edge aspects of their field of knowledge.   |
| CB02 | Apply their knowledge to their job or vocation in a professional manner and show that they have the competences to construct and justify arguments and solve problems within their subject area.  |
| CB03 | Be able to gather and process relevant information (usually within their subject area) to give opinions, including reflections on relevant social, scientific or ethical issues.  |
| CB04 | Transmit information, ideas, problems and solutions for both specialist and non-specialist audiences.   |
| CB05 | Have developed the necessary learning abilities to carry on studying autonomously   |
| D04  | Knowledge and ability to apply the fundamentals of elasticity and resistance of materials to the behaviour of real solids.  |

**5. Objectives or Learning Outcomes****Course learning outcomes****Description**

Calculate the distribution of tensions in a section

Apply basic knowledge of elasticity and resistance of materials to real solids

Measure simple structural elements

Initiation in learning of the non-elastic behaviour of solids

Manual techniques for calculating displacement and strengths in structural elements

To know when a solid can be studied through geometrical and material simplifications

## 6. Units / Contents

### Unit 1: Elastic behavior of three-dimensional solids.

**Unit 1.1** Introduction to the study of elasticity: Hypothesis and fundamental principles.

**Unit 1.2** Stresses: Concept of stress, equations of equilibrium, stresses and principal directions.

**Unit 1.3** Strains: Strains around of a point, strain state, strain vector, strains and principal directions and compatibility equations.

**Unit 1.4** Relationships between stresses and strains: tensile test, generalized Hook laws and Lamé equations.

### Unit 2: Theory of elasticity application and resistance of materials to real solids.

**Unit 2.1** Approach to the elastic problem: Internal and external balance, formulations of the fundamental equations of elasticity and general methods of resolution.

**Unit 2.2** Two-dimensional elasticity: Flat linear elasticity, tension and flat deformation and resolution methods.

### Unit 3: Introduction to non-elastic behaviors.

**Unit 3.1** Introduction to plastic theory: Plasticization criteria: von Mises criterion, Tresca criterion, Mohr-Coulomb criterion and Drucker-Prager criterion.

## 7. Activities, Units/Modules and Methodology

## 8. Evaluation criteria and Grading System

| Evaluation System             | Grading System |                    | Description   |
|-------------------------------|----------------|--------------------|---|
|                               | Face-to-Face   | Self-Study Student |   |
| Theoretical papers assessment | 30.00%         | 0.00%              | The reports of seminars, problems and / or papers presented as well as the attitude shown by the student will be evaluated. |
| Final test                    | 70.00%         | 0.00%              | Two tests related with the application of theoretical-practical aspects. Each test must be passed at least 5 out of 10.     |
| <b>Total:</b>                 | <b>100.00%</b> | <b>0.00%</b>       |   |

### Evaluation criteria for the final exam:

The subject will be passed with a score equal to or greater than 5.

For those students who have not passed some of the recoverable tests a global test will be set.

### Specifications for the resit/retake exam:

The subject will be passed with a score equal to or greater than 5.

For those students who have not passed some of the recoverable tests a global test will be set.

## 9. Assignments, course calendar and important dates
