**2. Pre-Requisites**

It would be advisable to have a basic knowledge of some mathematical tools optimization program (Mathematica, Matlab, GAMS).

**3. Justification in the curriculum, relation to other subjects and to the profession**

Basic training for the curriculum of students in the infrastructure and transport services area. The course deals with a set of specific topics unrelated to other sectors in which the link is the tools for optimisation and the mathematical formalisation of some of the problems inherent to the business management of the transport area.

**4. Degree competences achieved in this course****Course competences**

Code	Description
CB06	Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas, often in a research context.
CB07	Apply the achieved knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to the area of study
CB09	Know how to communicate the conclusions and their supported knowledge and ultimate reasons to specialized and non-specialized audiences in a clear and unambiguous way
G21	Ability to apply optimization tools to aid decision making, as well as to discern exploitation proposals compatible with the constraints and peculiarities of the built infrastructure.
G25	Ability to identify, measure, enunciate, analyse, diagnose and scientifically and technically describe a civil engineering problem
G26	Capacity to apply business management and labour law
G27	Ability to communicate in a second language.
TE08	Knowledge of transport engineering and planning, transport functions and modes, urban transport, management of public transport services, demand, costs, logistics and financing of transport infrastructure and services.
TE10	Capacity for planning, management and operation of civil engineering related infrastructures.

**5. Objectives or Learning Outcomes****Course learning outcomes****Description**

Students identify the participation of transport in the logistics sector.

Students can solve the problems typical of the management and operation of transport services from the scope of the operating company.

Students can solve the problems typical of planning, management and operation of transport from the scope of the administration.

Students know and understand the transport market.

Students are familiar with the organization of transportation.

Students are familiar with the management systems of a transport company.

Students know the economic costs and externalities of transport.

## 6. Units / Contents

Unit 1: Spanish Transport System

Unit 2: Economic Transport Costs

Unit 3: External Costs and Benefits of Transport Infrastructure

Unit 4: Financing Transport Services

Unit 5: Taxation Transport

Unit 6: Public Transport Services Management

Unit 7: Transport Services Companies Characterization

Unit 8: Marketing applied to Transport Services

Unit 9: Logistic

## 8. Evaluation criteria and Grading System

Evaluation System	Grading System		Description
	Face-to-Face	Self-Study Student	
Progress Tests	40.00%	0.00%	
Assessment of problem solving and/or case studies	40.00%	0.00%	
Oral presentations assessment	10.00%	0.00%	
Assessment of active participation	10.00%	0.00%	
<b>Total:</b>	<b>100.00%</b>	<b>0.00%</b>	

### Evaluation criteria for the final exam:

Exceptionally, a final exam may be taken for those students who have not reached the minimum level required to pass the course. This exam consists of an oral test in which the student will answer questions related to the work done by him/her during the course and a written test on terminology associated with the content of the course.

### Specifications for the resit/retake exam:

The same as in the ordinary one.
