2. Pre-Requisites

No pre-requisites have been established for accessing this course.

3. Justification in the curriculum, relation to other subjects and to the profession

This course is part of the 7th module on finance of the Bachelor's Degree in Business Administration and Management.

This course presents fundamental concepts of Finance, such as the principle of the value of money in time and the concept of interest, fundamental elements for the subsequent valuation of assets and investment analysis by capitalization and discounting of capital. It also analyses one of the main financing/investment operations in the company, such as loans in their different forms.

This subject is fundamental for the rest of the subjects of the Finance Module and in particular Investment Analysis and Portfolio Management (2nd year) and Financial Management (3rd year). It is necessary to be able to develop also all those subjects related to business management and, in particular, to Accounting (Financial and Business Accounting, and Accounting Analysis, etc...) and those related to taxation (Business Taxation). It also provides the necessary knowledge for the subjects of Economics (Microeconomics and Macroeconomics) and Economic Policy (in particular, monetary policy).

The concepts developed in this subject are fundamental to the management and financial management of companies, financial institutions and public entities. Basic concepts are developed to compare the cost of financing of different products as well as the profitability of alternative investment opportunities. An in-depth analysis is made of one of the first business financing operations: loans. On the other hand, the elements that are developed are essential for investment analysis and for the understanding of elementary financial products of both savings and investment.

4. Degree competences achieved in this course**Course competences**

Code	Description
E02	Develop and enhance entrepreneurship, adaptability to change and creativity in any functional area of a company or organization.
E09	Ability to carry out a financial evaluation of the different assets of a company at different points in time and at different levels of risk.
E13	Ability to make logical representative models of the business reality
G01	Possession of the skills needed for continuous, self-led, independent learning, which will allow students to develop the learning abilities needed to undertake further study with a high degree of independence.
G04	Ability to use and develop information and communication technologies and to apply them to the corresponding business department by using specific programmes for these business areas.
G05	Capacity for teamwork, to lead, direct, plan and supervise multidisciplinary and multicultural teams in both national and international environments so as to create synergies which benefit organisations.

5. Objectives or Learning Outcomes

Course learning outcomes

Description

To apply the quantitative analysis of the company and its environment.

Search for information in order to analyze it, interpret its meaning, synthesize it and communicate it to others.

Know the exchange of economic resources over time between individuals, companies and financial institutions, which involves the analysis of investment decisions and financing in the company, the theory of portfolios, the valuation of assets and the functioning of the financial markets.

Work autonomously and with personal initiative.

6. Units / Contents

Unit 1: The concept of interest

Unit 2: Fundamental concepts in mathematical finance

Unit 3: Annuities

Unit 4: Financial operations under certainty environment

Unit 5: Amortization operations

7. Activities, Units/Modules and Methodology

Training Activity	Methodology	Related Competences (only degrees before RD 822/2021)	ECTS	Hours	As	Com	R	Description

R: Rescheduling training activity

8. Evaluation criteria and Grading System

Evaluation System	Grading System		Description
	Face-to-Face	Self-Study Student	
Final test	70.00%	0.00%	
Other methods of assessment	30.00%	0.00%	
Total:	100.00%	0.00%	

Evaluation criteria for the final exam:

1.- Periodic evaluation of practice reports. 2.- Progress tests carried out during the class period. 3.- Final evaluation by means of a written exercise at the end of the course in which the student demonstrates his understanding of the theoretical concepts and the capacity to analyze and solve practical problems. The final written exercise must be passed with 50% of its maximum score (5 out of 10).

Specifications for the resit/retake exam:

Evaluations of practice reports and progress tests conducted during the class period will be retained.

Specifications for the second resit / retake exam:

No evaluation criteria have been specified.

9. Assignments, course calendar and important dates
