1. General information

Course:	PLANNING AND COASTAL AREAS MANAGEMENT	**Code:**	310816
Type:	ELECTIVE	**ECTS credits:**	4.5
Degree:	2343 - MASTERS DEGREE PROGRAMME IN ENGINEERING OF ROADS, CANALS AND PORTS	**Academic year:**	2020-21
Center:	603 - E.T.S. CIVIL ENGINEERS OF CR	**Group(s):**	20
Year:	2	**Duration:**	First semester
Main language:	English	**Second language:**	Spanish
Use of additional languages:		**English Friendly:**	N
Web site:		**Bilingual:**	N

Lecturer: **Mª DEL CARMEN CASTILLO SANCHEZ** - Group(s): **20**

2. Pre-Requisites

This subject adds to the knowledge obtained in the Coastal Engineering (Puertos y Costas) subject

3. Justification in the curriculum, relation to other subjects and to the profession

This subject adds to the knowledge obtained in the Coastal Engineering (Puertos y Costas) subject taking into consideration the value of the coast and its resources and the strategies to manage them.

4. Degree competences achieved in this course

Course competences

Code	Description
CB06	Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas, often in a research context.
CB07	Apply the achieved knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to the area of study
CB09	Know how to communicate the conclusions and their supported knowledge and ultimate reasons to specialized and non-specialized audiences in a clear and unambiguous way
CB10	Have the learning skills which allow to continue studying in a self-directed or autonomous way
G01	Scientific-technical and methodological capacity for the continuous recycling of knowledge and the exercise of the professional functions of consultancy, analysis, design, calculation, project, planning, leadership, management, construction, maintenance, conservation and exploitation in the fields of civil engineering.
G02	Understanding of the multiple technical, legal and property constraints that arise in the design of a public work, and the capacity to establish different valid alternatives, to choose the optimum one and to express it adequately, anticipating the problems of its construction, and using the most suitable methods and technologies, both traditional and innovative, with the aim of achieving the greatest efficiency and promoting the progress and development of a sustainable and respectful society with the environment.
G03	Knowledge, understanding and ability to apply the necessary legislation in the exercise of the profession of Civil Engineer.
G06	Ability to plan, design, inspect and manage land (roads, railways, bridges, tunnels and urban roads) or sea (port works and facilities) transport infrastructures.
G07	Knowledge to apply technical and managerial skills in R&D&I activities in the field of civil engineering.
G10	Capacity to carry out studies on spatial planning, on the coastal environment, on coastal planning and defence and on environmental aspects related to infrastructures.
G25	Ability to identify, measure, enunciate, analyse, diagnose and scientifically and technically describe a civil engineering problem
G27	Ability to communicate in a second language.
G29	Management capacity and teamwork.
IAMA1	Capacity for the alternative selection and general planning of a civil engineering action applied to the water industry, analysing the technological, functional, economic and environmental aspects.
IAMA2	Capacity to identify, quantify and interpret the consequences of hydraulic, maritime and environmental works and actions
IAMA3	Ability to understand the design constraints and the functioning of the different maritime works.
IAMA4	Knowledge of the project factors (parameters, agents and actions) involved in the design of maritime works.
TE07	Knowledge and skills to understand the dynamic phenomena involved in the ocean-atmosphere-coast environment and be able to provide answers to littoral, port and coastal problems, including the impact of actions on the coastline. Capacity to carry out studies and projects of maritime works.
TE10	Capacity for planning, management and operation of civil engineering related infrastructures.
TE11	Ability to analyse the environmental factors involved in an engineering action
TE12	Ability to assess the impact an engineering work can have on the environment and to define appropriate corrective measures.

5. Objectives or Learning Outcomes

Course learning outcomes

Description

Students interpret the consequences on coastal resources of different forms of coastal occupation and port actions.

Students identify the variables to be considered in coastal planning and management.

Students understand the integration of ports into the territory, their importance in the economic framework and their functioning.

Students understand the determinants of coastal and port planning and management.

Students know the alternatives for maintaining/restoring beaches.

6. Units / Contents

Unit 1: Introduction

Unit 2: Basic definitions on Coastal Management

Unit 3: Beaches

- **Unit 3.1** Stability and evolution models for beaches
- **Unit 3.2** Beach nourishment (soft engineering)
- **Unit 3.3** Beach armoring (hard engineering)

Unit 4: Ports

- **Unit 4.1** Vessel-Port-Land relations
- **Unit 4.2** Types of ports
- **Unit 4.3** Port facilities
- **Unit 4.4** Operational conditions
- **Unit 4.5** Resource Planning

As: Assessable training activity

Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

8. Evaluation criteria and Grading System

Evaluation System	Continuous assessment	Non-continuous evaluation*	Description
Assessment of active participation	10.00%	0.00%	Active participation in class
Practicum and practical activities reports assessment	10.00%	0.00%	Short exercise resolution
Assessment of activities done in the computer labs	5.00%	0.00%	Problem solving using software
Assessment of problem solving and/or case studies	35.00%	35.00%	Evaluated with the reports for each case

Oral presentations assessment	15.00%	15.00%	Oral exam based on presentation seminar and case report (individually graded through group exam)
Final test	25.00%	25.00%	Short test on basic concepts
Oral presentations assessment	0.00%	25.00%	Oral presentation of a scientific paper/topic related with the subject
Total:	**100.00%**	**100.00%**	

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject , an ordinary and an extraordinary one (evaluating 100% of the competences).

Evaluation criteria for the final exam:

Continuous assessment:

In order to pass the subject, the following minimum marks must be satisfied:

a) Reports for each case study: 5;

b) Presentation of cases: 4;

c) Final exam: 4;

d) Global mark: 5;

Non-continuous evaluation:

Unless stated otherwise, continuous evaluation criteria will be applied to all students.
Anyone choosing non-continuous evaluation must notify it to the lecturer at least 72 hours before the official date established for the final exam or the retake exam.

All activities are individual

Any plagiarism will be sanctioned with a 0 in the corresponding global activity. Global activities are described in the Grading System table.

Specifications for the resit/retake exam:

In order to pass the subject, the following minimum marks must be satisfied:

a) Reports for each case study: 5;

b) Presentation of cases: 4;

c) Final exam: 4;

d) Global mark: 5;

All these marks can be retaken on this exam.

Specifications for the second resit / retake exam:

Same criteria as non-continuos evaluation
