**2. Pre-Requisites**

No prerequisites have been established, although it is very recommended to have passed the first-year Chemistry course.

**3. Justification in the curriculum, relation to other subjects and to the profession**

Gravimetric and Volumetric Analysis is a subject that belongs to module 2 (Fundamentals of Chemistry). This subject and Fundamental of Analytical Chemistry constitute Analytical Chemical Matter which has 12 credits. Both of them are taught in the first semester of the second year.

It is a compulsory subject of 6 ECTS (4.5 theoretical credits and 1.5 practical credits). Furthermore, the knowledge acquired in this subject is necessary to learn subjects from other areas of knowledge, due to its multidisciplinary character

**4. Degree competences achieved in this course****Course competences**

Code	Description
CB02	Apply their knowledge to their job or vocation in a professional manner and show that they have the competences to construct and justify arguments and solve problems within their subject area.
CB03	Be able to gather and process relevant information (usually within their subject area) to give opinions, including reflections on relevant social, scientific or ethical issues.
CB05	Have developed the necessary learning abilities to carry on studying autonomously
E05	Know the chemical elements and their compounds, their forms of obtaining, structure, properties and reactivity, as well as the main techniques for their analysis
E14	Know and know how to apply the metrology of chemical processes, including quality management
E15	Know how to handle the standard chemical instrumentation and be able to elaborate and manage standardized procedures of work in the laboratory and chemical industry
G01	Know the principles and theories of Chemistry, as well as the methodologies and applications characteristic of analytical chemistry, physical chemistry, inorganic chemistry and organic chemistry, understanding the physical and mathematical bases that require
G03	Know how to apply the theoretical-practical knowledge acquired in the different professional contexts of Chemistry
T04	Ethical commitment and professional ethics
T05	Organization and planning capacity
T06	Ability to approach decision making
T09	Motivation for quality, job security and awareness of environmental issues, with knowledge of internationally recognized systems for the correct management of these aspects
T11	Ability to obtain bibliographic information, including Internet resources

**5. Objectives or Learning Outcomes****Course learning outcomes**

## Description

Acquire skills for practical laboratory work, being able to experimentally develop analytical processes that include sample planning, treatment and analysis using volumetric and gravimetric techniques.

Train the student for autonomous work and learning, as well as for personal initiative

Train the student to search for information, its analysis, interpretation and use for analytical purposes

Train the student to be sensitive to the ethical exercise of the profession, becoming aware of the social responsibility of their reports and their impact on decision making

Train the student to solve analytical problems based on the use of volumetric and gravimetric analysis techniques, planning laboratory work protocols.

Know the basis of volumetric and gravimetric techniques and the main analytical methods based on these techniques.

Know the stages that make up the analytical process

Know the principles of Analytical Chemistry.

## 6. Units / Contents

**Unit 1: INTRODUCTION. Classical techniques: Gravimetry and Titrimetry. Classification of volumetric methods. Primary standards**

**Unit 2: ACID- BASE TITRATIONS. Acid-base Indicators. Types of indicators. Titration curves: Titration of monoprotic and polyprotic protolytes. Analytical applications.**

**Unit 3: COMPLEXATION TITRATIONS. Complexation reactions. Titration curves. Complexometric EDTA Titrations. Metallochromic indicators. Types of complexation titration. Applications.**

**Unit 4: PRECIPITATION TITRATIONS. Introduction. Titration Curves. Mohr's method. Volhard's method. Fajans's method. Most used primary standards**

**Unit 5: Gravimetry. Introduction. Types of gravimetric methods. Formation and treatment of precipitates. Precipitation gravimetry. General steps involved in gravimetric analysis.**

**Unit 6: REDOX TITRATIONS. Titration Curves. Redox indicators. Pre-treatment in redox titrations. Titrations with permanganate. Titrations with dichromate. Titrations involving iodine.**

## 7. Activities, Units/Modules and Methodology

Training Activity	Methodology	Related Competences (only degrees before RD 822/2021)	ECTS	Hours	As	Com	Description

<b>Total credits of out of class work: 3.6</b>			<b>Total hours of out of class work: 90</b>				

As: Assessable training activity

Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

## 8. Evaluation criteria and Grading System

Evaluation System	Continuous assessment	Non-continuous evaluation*	Description
Laboratory sessions	15.00%	15.00%	The evaluation will take into account the work done during the laboratory practices sessions and the reports presented from each practice It is necessary to obtain a grade of 5 out of 10 to pass the course. If this is not achieved, a specific test will have to be carried out in the ordinary and / or extraordinary exam. The laboratory sessions are of compulsory attendance
Progress Tests	80.00%	0.00%	Two written assessment test that will consist of solving theoretical, theoretical-practical questions and numerical / analytical problems from lessons 1 to 3 and 4 to 6 respectively. If the grade obtained in this test is higher than 6, you only have to examine from lessons 4 to 6 in the final test.
			The final test will only be done by students who have not passed the progress tests or who want to improve their grade The final test will consist of solving theoretical, theoretical-practical questions and numerical / analytical problems for the

Final test	0.00%	85.00%	entire subject. In this case the assessment of this exam will be 80% It is necessary to obtain a minimum grade of 5, to be able to compute it with the rest of the activities.
Assessment of problem solving and/or case studies	5.00%	0.00%	The student will be asked to deliver solved exercises, solve different issues related to the subject, solve practical cases
<b>Total:</b>	<b>100.00%</b>	<b>100.00%</b>	

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences).

#### Evaluation criteria for the final exam:

##### Continuous assessment:

To pass the matter, it is mandatory to:

- 1) Obtain an average minimum grade of 5 over 10 with a minimum of 4 in the progress tests or a minimum grade of 5 in the final test
- 2) Perform and pass the laboratory work. It is necessary to obtain by means of report delivery at least a rating of 5 out of 10. .

The applied assessment percentages will be 80% for the final test or progress tests, 15% for laboratory practices and 5% for problem solving

##### Non-continuous evaluation:

To pass the matter, it is mandatory to:

- 1) Obtain an average minimum grade of 5 over 10 with a minimum of 4 in the progress tests or a minimum grade of 5 in the final test
- 2) Perform and pass the laboratory work. It is necessary to obtain by means of report delivery at least a rating of 5 out of 10. .

The applied assessment percentages will be 85% for the final test and 15% for laboratory practices..

#### Specifications for the resit/retake exam:

The final mark of this examen will be obtained by taking a final exam (85%) and the grade obtained from the laboratory practices (15%) will be taken into account. It is necessary to obtain at least a rating of 5 out of 10 in both items.

#### Specifications for the second resit / retake exam:

Same as in the retake examen
