# 2. Pre-Requisites

It is expected that the student will have knowledge of mathematics, physics and chemistry from previous courses, knowledge of Materials Science and basic knowledge of manufacturing.

## 3. Justification in the curriculum, relation to other subjects and to the profession

Materials Engineering and Technology is a compulsory subject, taught in the sixth semester, common to the industrial branch. The engineer must know the principles of materials engineering and technology for his/her professional development.

The subject of Materials Engineering and Technology is directly linked to the subject of Materials Science, taught in the third semester, and complements other subjects such as Manufacturing and Design Technology, Calculation and Testing of Machines, etc.

| 4. Degree competenc | es achieved in this course  |
|---------------------|---|
| Course competences  |   |
| Code                | Description   |
| A01                 | To understand and have knowledge in an area of study that moves on from the general education attained at secondary level and<br>usually found at a level that, while supported in advanced text books, also includes some aspects that include knowledge found at the<br>cutting edge of the field of study. |
| A02                 | To know how to apply knowledge to work or vocation in a professional manner and possess the competences that are usually demonstrated by the formulation and defence of arguments and the resolution of problems in the field of study.   |
| A03                 | To have the capability to gather and interpret relevant data (normally within the area of study) to make judgements that include a reflection on themes of a social, scientific or ethical nature.  |
| A04                 | To be able to transmit information, ideas, problems and solutions to a specialized audience.  |
| A05                 | To have developed the learning skills necessary to undertake subsequent studies with a greater degree of autonomy.  |
| A06                 | Command of a second foreign language at B1 level of the Common European Framework of Refence for Languages.   |
| A08                 | Appropriate level of oral and written communication.  |
| A12                 | Knowledge of basic materials and technologies that assist the learning of new methods and theories and enable versatility to adapt to new situations.   |
| A13                 | Ability to take the initiative to solve problems, take decisions, creativity, critical reasoning and ability to communicate and transmit knowledge, skills and abilities in Mechanical Engineering.   |
| A14                 | Knowledge to undertake measurements, calculations, evaluations, appraisals, studies, give expert opinions, reports, work plans and similar tasks.   |
| A15                 | Ability to work to specifications and comply with obligatory rules and regulations.   |
| C03                 | Knowledge of the fundamentals of science, technology and chemistry of materials. Understanding of the relation between the microstructure, synthesis, processing and properties of materials.   |
| CB01                | Prove that they have acquired and understood knowledge in a subject area that derives from general secondary education and is appropriate to a level based on advanced course books, and includes updated and cutting-edge aspects of their field of knowledge.   |
| CB02                | Apply their knowledge to their job or vocation in a professional manner and show that they have the competences to construct and justify arguments and solve problems within their subject area.  |
| CB03                | Be able to gather and process relevant information (usually within their subject area) to give opinions, including reflections on relevant social, scientific or ethical issues.  |
| CB04                | Transmit information, ideas, problems and solutions for both specialist and non-specialist audiences.   |
| CB05                | Have developed the necessary learning abilities to carry on studying autonomously   |
| D07                 | Knowledge and ability in the application of materials engineering.  |

#### Description

The students will be able to identify the different procedures for part inspection and flaw detection via non-destructive testing

The students will become aware of the importance of knowing and predicting the behaviour of a material when in service

The students will be able to select the most suitable material for an application in simple cases

The students will be able to identify the basic procedures for the improvement of materials through surface engineering

The students will be able to identify the techniques for joining parts by welding and adhesives

The students will be able to identify the most common procedures for material processing techniques and recognize the effects of processing on the structure and properties of the material

The students will be able to distinguish the different heat treatments of metals

The students will get introduced to the engineering and technology of materials

#### 6. Units / Contents

## Unit 1: Materials In-service Performance

Unit 1.1 Introduction. Objectives of Materials Engineering and Technology.

- Unit 1.2 Fracture Processes. Fatigue Fracture.
- Unit 1.3 High Temperature Creep.
- Unit 1.4 Oxidation and Corrosion.
- Unit 1.5 Friction, Wear and Lubrication.
- Unit 1.6 Crack Detection. Non-destructive Testing.

## **Unit 2: Processing and Forming**

#### Unit 2.1 Foundry Processes.

- Unit 2.2 Plastic Deformation Forming.
- Unit 2.3 Sintering.
- Unit 2.4 Processing composite materials.
- Unit 2.5 3D Printing

## Unit 3: Thermal Treatments, Joining and Surface Modification.

- Unit 3.1 Annealing and Normalising.
- Unit 3.2 Martensitic Transformations.
- Unit 3.3 Isothermic Treatments.
- Unit 3.4 Precipitation and Aging Treatment in Aluminium Alloys
- Unit 3.5 Fundamentals of Welding. Adhesive Bonding.
- Unit 3.6 Surface Treatments and Coatings against Corrosion.
- Unit 3.7 Surface Hardening Methods for Wear Resistance.

# Unit 4: Materials Selection in Mechanical Engineering.

- Unit 4.1 Methodology and Resources for the Selection of Materials and Processes.
- Unit 4.2 Materials Selection: Case-studies.

#### ADDITIONAL COMMENTS, REMARKS

#### Laboratory Practicals

- 1. Fracture observation.
- 2. Roughness measurement with an Atomic Force Microscope.
- 3. Non-destructive Testing: Liquid Penetrate Inspection.
- 4. Characterization of Foundries.
- 5. Thermal Treatments: Annealing, Normalising, Quenching and Tempering.
- 6. Jominy End-Quench Test.
- 7. Precipitation and Aging Treatment in Al-Co alloys.
- 8. Electrodeposition. Characterization of coatings.

| 7. Activities, Units/Modules and Methodology     |                                  |   |      |       |    |     |   |
|--|----------------------------------|---|------|-------|----|-----|---|
| Training Activity                                | Methodology                      | Related Competences<br>(only degrees before RD<br>822/2021)                           | ECTS | Hours | As | Com | Description   |
| Class Attendance (theory) [ON-<br>SITE]          | Lectures                         | A01 A02 A03 A04 A05 A06<br>A08 A12 A13 A14 A15 C03<br>CB01 CB02 CB03 CB04<br>CB05 D07 | 0.8  | 20    | N  | -   | The Professor will focus the topic<br>and explain the fundamental<br>contents, using blackboard,<br>audiovisual media and chair<br>experiences.   |
| Laboratory practice or sessions<br>[ON-SITE]     | Practical or hands-on activities | A01 A02 A03 A04 A05 A06<br>A08 A12 A13 A14 A15 C03<br>CB01 CB02 CB03 CB04<br>CB05 D07 | 0.32 | 8     | Y  |     | Development of Laboratory<br>Practicals in small groups.  |

Case<br>studies, or work of further developing<br>concepts, may also be included. |
|  |                                  |   |      |       |    |     |   |

| Total credits of out of class work: 3.6    |                               |   |                            |     |   | Total hours of out of class work: 90  |
|--|-------------------------------|---|----------------------------|-----|---|---|
| Total credits of in-class work: 2.4        |                               |   | Total class time hours: 60 |     |   |   |
| Total:                                     |                               |   | 6                          | 150 |   |   |
| Study and Exam Preparation [OFF-<br>SITE]  | Self-study                    | A01 A02 A03 A04 A05 A06<br>A08 A12 A13 A14 A15 C03<br>CB01 CB02 CB03 CB04<br>CB05 D07 | 3.6                        | 90  | N | The student will revise and study<br>his/her classroom notes, completing<br>them with the bibliography provided<br>- by the Professor. Also, he/she will<br>work on the resolution of the lists of<br>problems and case studies that will<br>be discussed in the classroom. |
| Final test [ON-SITE]                       | Assessment tests              | A02 A03 A04 A05 A06 A08<br>A12 A13 A14 A15 C03<br>CB01 CB02 CB03 CB04<br>CB05 D07     | 0.16                       | 4   | Y | The student will take a final exam of<br>the subject that will consist in short-<br>answer questions and application<br>problems.   |
| Individual tutoring sessions [ON-<br>SITE] | Problem solving and exercises | A01 A02 A03 A04 A05 A06<br>A08 A12 A13 A14 A15 C03<br>CB01 CB02 CB03 CB04<br>CB05 D07 | 0.32                       | 8   | N | The professor will individually attend<br>- to the students, to solve their doubts<br>in exercises, problems or concepts,<br>and monitor their progress.  |

As: Assessable training activity

Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

| 8. Evaluation criteria and Grading System             |                          |                                   |  |  |  |  |  |
|---|--------------------------|-----------------------------------|--|--|--|--|--|
| Evaluation System                                     | Continuous<br>assessment | Non-<br>continuous<br>evaluation* | Description  |  |  |  |  |
| Practicum and practical activities reports assessment | 20.00%                   | 20.00%                            | The Laboratory Praticals reports will be assessed, taking into account the theoretical and procedure explanations, the treatment of the data obtained in the laboratory, the elaboration of graphs and figures, and the presentation of the results. |  |  |  |  |
| Assessment of problem solving and/or case studies     | 5.00%                    | 5.00%                             | The presentation of the provided lists of problems solved in full detail will be assessed.   |  |  |  |  |
| Assessment of active participation                    | 5.00%                    | 0.00%                             | The participation, actitude and involvement of the student on the subject-related activities will be taken into account.   |  |  |  |  |
| Final test  | 70.00%                   | 75.00%                            | The final test will be passed with a rating of 5/10. It will be necessary to achive independently a 5/10 rating in both problem solving and conceptual issues.   |  |  |  |  |
| Tot   | al: 100.00%              | 100.00%                           |  |  |  |  |  |

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences).

#### Evaluation criteria for the final exam:

# Continuous assessment:

The evaluation will take into account the participation in Laboratory Practicals, problem solving, case studies, reports on further developing concepts (30%), and the final test (70%). The assistance to the Laboratory Practicals will be a requirement to pass the subject.

# Non-continuous evaluation:

The evaluation will take into account the presented reports relative to the Laboratory Practicals (20%), solved lists of problems (5%) and the final test (75%). The assistance to the Laboratory Practicals will be a requirement to pass the subject.

#### Specifications for the resit/retake exam:

The evaluation will be based on the resit/retake exam. The assistance to the Laboratory Practicals will be a requirement to pass the subject.

## Specifications for the second resit / retake exam:

The evaluation will be based on the second resit/retake exam. The assistance to the Laboratory Practicals will be a requirement to pass the subject.
