

## 1. General information

**Course:** INTEGRAL MANAGEMENT OF WASTES AND EMISSIONS IN THE INDUSTRY

**Code:** 310744

**Type:** CORE COURSE

**ECTS credits:** 6

**Degree:** 2336 - MASTER DEGREE PROGRAM IN CHEMICAL ENGINEERING

**Academic year:** 2021-22

**Center:** 1 - FACULTY OF SCIENCE AND CHEMICAL TECHNOLOGY

**Group(s):** 20

**Year:** 1

**Duration:** First semester

**Main language:** Spanish

**Second language:** English

**Use of additional languages:**

**English Friendly:** Y

**Web site:**

**Bilingual:** N

**Lecturer:** CARMEN MARIA FERNANDEZ MARCHANTE - Group(s): 20

## 4. Degree competences achieved in this course

## Course competences

Code	Description
CB07	To be able to apply acquired knowledge and problem-solving skills in new or unknown environments within broader (or multidisciplinary) contexts related to their area of study
CB09	To be able to communicate their findings, and the ultimate knowledge and reasons behind them, to specialist and non-specialist audiences in a clear and unambiguous manner
E02	To design products, processes, systems and services of the chemical industry, as well as the optimization of others already developed, taking as technological base the diverse areas of the chemical engineering, comprehensive of processes and transport phenomena, separation processes and engineering of the chemical, nuclear, electrochemical and biochemical reactions.
E05	To direct and supervise all types of installations, processes, systems and services of the different industrial areas related to chemical engineering.
E06	Design, build and implement methods, processes and facilities for the integrated management of supplies and waste, solid, liquid and gaseous, in industries, with the capacity to evaluate their impacts and risks.
E14	To direct and manage environmental and/or energy activities.
G01	To have adequate knowledge to apply the scientific method and the principles of engineering and economics, to formulate and solve complex problems in processes, equipment, facilities and services, in which matter undergoes changes in its composition, state or energy content, characteristic of the chemical industry and other related sectors including the pharmaceutical, biotechnological, materials, energy, food or environmental sectors.
G02	To conceive, project, calculate and design processes, equipment, industrial facilities and services, in the field of chemical engineering and related industrial sectors, in terms of quality, safety, economy, rational and efficient use of natural resources and environmental conservation.
G04	To conduct appropriate research, undertake design and direct the development of engineering solutions, in new or unfamiliar environments, relating creativity, originality, innovation and technology transfer.
G06	To have the capacity of analysis and synthesis for the continuous progress of products, processes, systems and services using criteria of safety, economic viability, quality and environmental management.
MC1	To have acquired advanced knowledge and demonstrated an understanding of the theoretical and practical aspects and of the working methodology in the field of Chemical Engineering with a depth that reaches the forefront of knowledge
MC2	To be able, through arguments or procedures developed and supported by themselves, to apply their knowledge, understanding and problem-solving skills in complex or professional and specialized work environments that require the use of creative or innovative ideas
MC3	To have the ability to collect and interpret data and information on which to base their conclusions including, where necessary and relevant, reflection on social, scientific or ethical issues in the field of chemical engineering
MC4	To be able to deal with complex situations or those that require the development of new solutions in the academic, work or professional field of study of Chemical Engineering

MC5	To know how to communicate to all types of audiences (specialized or not) in a clear and precise way, knowledge, methodologies, ideas, problems and solutions in the field of the study of Chemical Engineering
MC6	To be able to identify their own training needs in the field of study of Chemical Engineering and work or professional environment and to organize their own learning with a high degree of autonomy in all kinds of contexts (structured or unstructured).

## 5. Objectives or Learning Outcomes

### Course learning outcomes

#### Description

To know the main technologies for the treatment of solid waste, liquid effluents and gaseous emissions in the industry.

To be able to establish the environmental impact of such industrial activity, and propose integrated environmental management plans in order to minimize such impact

To have the ability to raise the options to minimize such emissions as much as possible

To be able to identify the potential points of emission of liquid, solid, or gaseous waste in an industrial activity, as well as their flows and characteristics.

To be able to carry out environmental audits and assess other basic aspects of environmental management such as environmental risks and responsibility
