2. Pre-Requisites Not established

3. Justification in the curriculum, relation to other subjects and to the profession

This subject belongs to Module 2 (Common to the Industrial Branch). It is especially related to the subjects of Materials in Chemical Engineering and Fundamentals of Mechanical Design. This subject applies the previously learned concepts to carry out the mechanic

| 4. Degree competences achieved in this course | | | | | |
|---|--|--|--|--|--|
| Course competences | | | | | |
| Code | Description | | | | |
| CB02 | Apply their knowledge to their job or vocation in a professional manner and show that they have the competences to construct and justify arguments and solve problems within their subject area. | | | | |
| CB03 | Be able to gather and process relevant information (usually within their subject area) to give opinions, including reflections on relevant social, scientific or ethical issues. | | | | |
| E13 | Knowledge of the principles of machine theory and mechanisms. | | | | |
| E14 | Knowledge and use of the principles of the resistance of materials. | | | | |
| G01 | Capacity for the direction, of the activities object of the engineering projects described in the competence G1. | | | | |
| G02 | Knowledge in basic and technological subjects, which enables them to learn new methods and theories, and give them versatility to adapt to new situations. | | | | |
| G03 | Ability to solve problems with initiative, decision making, creativity, critical reasoning and to communicate and transmit knowledge, skills and abilities in the field of Chemical Engineering. | | | | |
| G05 | Ability to handle specifications, regulations and mandatory standards. | | | | |
| G06 | Ability to analyze and assess the social and environmental impact of technical solutions. | | | | |
| G11 | Proficiency in a second foreign language at level B1 of the Common European Framework of Reference for Languages | | | | |
| G20 | Ability to learn and work autonomously | | | | |

5. Objectives or Learning Outcomes Course learning outcomes

Description To know the atenuation techniques and the anticorrosive design principles.

To know the selection criteria of the construction materials of the chemical industry equipment and the causes and mechanisms of their deterioration, or of their corrosion

To understand the fundamentals of mechanical design and know the standardized procedures (ASME, API) necessary to carry out the analysis or design of internal and external pressure vessels, storage tanks, etc.

6. Units / Contents Unit 1: Corrosion and degradation of materials. Unit 2: Materials selection in chemical engineering. Unit 3: Thermodynamics and kinetics of aqueous and hot corrosion. Unit 4: Corrosion prevention and protection. Unit 5: Corrosion types and failure analysis. Unit 6: Mechanical design of process equipment: fundamental principles and general consideration Unit 7: Vessel design under internal pressure: shells, bottoms and heads. Unit 8: Vessels design under external pressure: shells, bottoms and heads Unit 9: Design of oil storage tanks.

Unit 10: Vessel supports, flanges and reinforcements. Unit 11: Mechanical design of heat exchangers and centrifugues ADDITIONAL COMMENTS, REMARKS

Topics 1 to 5 belong to Didactic Unit 1: "Deterioration, corrosion and methods of protection of construction materials in the chemical industry".

Topics 6 to 11 belong to Didactic Unit 2: "Mechanical design of chemical equipment"

| 7. Activities, Units/Modules and Methodology | | | | | | | | |
|--|---|--|------|--------------------------------------|----|-----|-------------|--|

| | | | | 150 | | | | |

As: Assessable training activity Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

8 Evaluation criteria and Grading SV

| Evaluation System | Continuous assessment | Non-continuous evaluation* | Description | | | |
|---|--------------------------|-------------------------------|--|--|--|--|
| Practicum and practical activities reports assessment | 10.00% | 0.00% | Active participation in the laboratory and the computer classroom will be positively valued. A small report written by each group of practices will be evaluated | | | |
| Assessment of problem solving and/or case studies | 20.00% | 0.00% | Carry out properly the problems proposed in group, assessing the correctness in the approach, in the development and in the final result. Concept errors and errors in basic mathematical operations will involve penalties. | | | |
| Progress Tests | 70.00% | 100.00% | Correctly and reasonably answer the theory questions, as well as adequately carry out the exercises proposed in the partial exam on concepts in unit 1. Students who obtain a grade of 4/10 both in theory and in problems release this matter for the exam Ordinary. Resolution of proposals for calculating equipment whose design is dealt with in Unit 2. The evaluation of Unit 2 will be carried out in the ordinary exam. | | | |
| Total | 100.00% | 100.00% | | | | |

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences)

Evaluation criteria for the final exam:

Continuous assessment: To pass the course in the ordinary call, a minimum average mark of 5/10 is necessary and a minimum mark of 4/10 in the progress tests or in the final test.

Non-continuous evaluation:

For people who have not attended the practices or submitted problems / cases, 100% of the skills will be evaluated with theoretical questions in the final exam.

Specifications for the resit/retake exam:
