3. Justification in the curriculum, relation to other subjects and to the profession

Public revenues constitute the other side of any Public Budget that, together with spending programs, delimit the actions of the Public Sector in a developed economy. Its dimension and structure constitute elements of essential analysis in the configuration of the functions entrusted to the intervention of the Public Sector, which has so much impact on the correct functioning of the business sector.

Public revenues, and especially taxes, due to their size and composition, affect economic agents, which can generate distortions in the allocation of resources of the economic system as a whole (efficiency issues), and / or affect fundamental economic behavior such as supply of work, savings, the assumption of financial or business risks, portfolio decisions, investment policy and business financing or tax evasion.

This program aims, with this approach, to introduce the student to the knowledge of the reality of the Spanish Tax System, with special dedication to the so-called business taxation. It has been considered convenient in the structure of the Degree in ADE to develop corporate taxation, both personal and corporate, both because of the intrinsic importance of the subject and because of the social and student demand that the academic experience reveals. It also aims to provide introductory and basic notions in tax planning, analyzing how taxes affect certain decisions of individuals in their business or professional sphere, and how to derive some rules that facilitate the adoption of the best decisions, taking into account those fiscal factors.

This subject is closely related to General and Financial Accounting, to financial economics and commercial law.
