Not established

3. Justification in the curriculum, relation to other subjects and to the profession

Anthropogenic climate change is one of the main environmental threats for mankind. The main objective of this subject is to provide a good knowledge about the fundamentals of climate change science, giving illustrative examples of the main implications that climate change has and could have in the future. This forms the basis for mitigation strategies for consequences of future scenarios, as well as for adapting to such consequences. When a student studies this subject, it is intended firstly that he understands the complexity and magnitude of the problem, and then that he knows various mitigating actions offered by technology. For this reason, the learning process follows this sequence:

- Understanding the basic physical principles that determine global climate.
- Knowing the components of climate system and the complex interactions among them
- Studying climate variability at several timescales
- Analyzing the main causes of observed climate change
- Knowing the techniques of climate modelling and their uncertainties
- Knowing and interpreting current projections of anthropogenic climate change
- Studying the main impacts and consequences of anthropogenic climate change
- Knowing and analyzing strategies for mitigating anthropogenic climate change and adapting to its consequences

Despite the subject having a particularly strong relationship to the subject of Meteorology and Climatology, impacts of climate change occur (or they are expected to occur) in all types of areas, and because of this the subject has a strong multidisciplinary component and provides a knowledge with large practical importance for the development of the environmentalist profession.

4. Degree competences achieved in this course**Course competences**

Code	Description
CB01	Prove that they have acquired and understood knowledge in a subject area that derives from general secondary education and is appropriate to a level based on advanced course books, and includes updated and cutting-edge aspects of their field of knowledge.
CB05	Have developed the necessary learning abilities to carry on studying autonomously
E01	Ability to understand and apply basic knowledge.
E03	Awareness of the temporal and spatial dimensions of environmental processes
E05	Capacity for qualitative data interpretation
E06	Capacity for quantitative data interpretation
E27	Know clean technologies and renewable energies.
E28	Energy management and optimization capacity
G01	Proficiency in a second foreign language at level B1 of the Common European Framework of Reference for Languages.
G02	Knowledge of Information and Communication Technologies (ICT).
G03	Good oral and written communication
G04	Ethical commitment and professional deontology

5. Objectives or Learning Outcomes**Course learning outcomes**

Description

Learn to relate environmental phenomena to the principles of physics that explain them. Especially those related to meteorological, climatological, air, noise and radiation pollution processes.

To know the projections of anthropogenic climate change, its causes, its main consequences, the techniques for its study and the strategies for its mitigation.
To understand the components of the climate system, the complex interactions between them and climate variability at different time scales.

6. Units / Contents

Unit 1: Introduction: The climate system

Unit 2: Planetary balances of energy and water

Unit 3: The atmosphere

Unit 4: The oceans

Unit 5: Sensitivity of climate system and feedback mechanisms

Unit 6: The evolution of earth climate

Unit 7: Anthropogenic climate warming. Climate change

Unit 8: Climate models. Global and regional climate change scenarios

Unit 9: Impacts of climate change

Unit 10: Mitigation of climate change. Energy and transport for the future

7. Activities, Units/Modules and Methodology

Training Activity	Methodology	Related Competences (only degrees before RD 822/2021)	ECTS	Hours	As	Com	Description
Class Attendance (theory) [ON-SITE]	Lectures	CB05 E01 E03 E05	0.84	21	N	-	
Computer room practice [ON-SITE]	Combination of methods	CB01 CB05 E01 E03 E05 E06 G01 G02	0.6	15	Y	N	
Writing of reports or projects [OFF-SITE]	Combination of methods	CB01 CB05 E01 E03 E05 E06 E27 E28 G01 G02 G03 G04	1.2	30	Y	N	
Project or Topic Presentations [ON-SITE]	Combination of methods	E03 E05 E06 E27 E28 G02 G03	0.24	6	Y	N	
Study and Exam Preparation [OFF-SITE]	Self-study	CB01 CB05 E01 E03 E05 E06 E27 E28 G01	1.5	37.5	N	-

Final test [ON-SITE]	Assessment tests	CB01 CB05 E01 E03 E05 E06 E27 E28 G03	0.08	2	Y	Y	
Total:			4.5	112.5			
Total credits of in-class work: 1.8			Total class time hours: 45				
Total credits of out of class work: 2.7			Total hours of out of class work: 67.5				

As: Assessable training activity

Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

8. Evaluation criteria and Grading System

Evaluation System	Continuous assessment	Non-continuous evaluation*	Description
Final test	35.00%	100.00%	Continuous assessment: Students that have passed the midterm exam (with a minimum grade of 4 over 10) only have to be assessed for the second part of the subject. Students that have not passed the midterm exam have to be assessed for the two parts of the subject. In this later case, the weight of the final exam in the final grade will be 70%. Non-continuous evaluation: the final grade of the subject will be the grade obtained in the final exam.
Practicum and practical activities reports assessment	15.00%	0.00%	
Progress Tests	35.00%	0.00%	Midterm exam for the first part of the topics. If passed, this part will not be included in the final exam. For passing this exam, a minimum grade of 4 over 10 is needed.
Theoretical papers assessment	15.00%	0.00%	
Total:	100.00%	100.00%	

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences).

Evaluation criteria for the final exam:

Continuous assessment:

The final grade will be obtained applying the indicated weights to the progress test, the practicum, the assessment of the report and the final exam. If the progress test (midterm exam) has not been passed, the weight of the final exam will be 70%.

Non-continuous evaluation:

The grade of the final exam will be equal to 100% of the final grade.

Specifications for the resit/retake exam:

Continuous assessment: The assessment criteria for the midterm exam and the final exam will be the same indicated above: if the midterm exam has been passed, it will have a 35% weight and the retake exam (for the second part of the topics) will have a 35% weight, but if the midterm exam has not been passed,

the weight of the retake exam (covering all the topics) will be 70%. The grades for the practicum and the report will be those obtained during the course, but in case of a fail grade the practicum and/or the report optionally may be presented again.

Non-continuous evaluation: The grade of the final exam will be equal to 100% of the final grade.

Specifications for the second resit / retake exam:

The final grade in this case will coincide with the grade obtained in this second retake exam.
