4. Degree competences achieved in this course

Course competences

Code

To have appropriate knowledge of the scientific and technological aspects of mathematical, analytical and numerical methods in engineering, electrical engineering, energy engineering, chemical engineering, mechanical engineering, continuous medium A01

mechanics industrial electronics, automation, manufacturing, materials, quantitative management methods, industrial computing, town

planning, infrastructures, etc.

A02 To plan, calculate and design products, processes, facilities and plants.

Knowledge, understanding and capacity to apply the required legislation in the industrial engineering profession A12

B03 Capacity to design and test machines

CB06 Knowledge and skills to organise and manage enterprises.

CB07 Strategy and planning knowledge and skills applied to different organisational structures.

CB08 Knowledge of commercial and labour law. **CB09** Knowledge of financial and costs accounting.

CB10 Knowledge of information systems for management, industrial organisation, production, logistics and quality management systems.

D01 Ability to design, construct and exploit industrial plants.

D02 Knowledge of construction, building, installations, infrastructures and urban planning in the scope of industrial engineering.

D03 Knowledge for the calculation and design of structures.

Knowledge and abilities to plan and design electrical and fluid installations, lighting, heating and ventilation, energy saving and D04

efficiency, acoustics, communications, domotics, Smart buildings and security installations.

5. Objectives or Learning Outcomes

Course learning outcomes

Description

Design and calculate structures in the field of industrial engineering.

Study, mainly by means of numerical methods, different structural elements, how they work and are calculated. They will study structures made of metal, reinforced concrete, new materials and compound materials, in static and dynamic conditions. These elements are integrated in such a way that the student will be able to analyse a complete structural complex.

Acquire the knowledge needed to perform a dynamic study of machines and mechanisms, determining the loads on the different structural components: external loads, inertial load and kinematic pair reaction load.

6. Units / Contents

Unit 1: Structural tipology

Unit 2: Structural Elements (beams, Plates, Shells)

Unit 3: Static and dynamic analysis

Unit 4: Metal Structures

Unit 5: Machines and Mechanisms Tipologies

Unit 6: Kinematic analysis

Unit 7: Reverse dynamic analysis

Unit 8: Direct dynamic analysis

8. Evaluation criteria and Grading System						
Evaluation System	Continuous assessment	Non- continuous evaluation*	Description			
Final test	70.00%	100.00%	Evaluation of the final test			
Theoretical papers assessment	15.00%	0.00%	Proposed exercises			
Laboratory sessions	15.00%	0.00%				
Total:	100.00%	100.00%				

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences).

Evaluation criteria for the final exam:

Continuous assessment:

Overall final grade must be equal or higher than 5

Overall final grade = 0.7*Final test + 0.3*Proposed exercises (final test grade must be equal or higher than 4)

Non-continuous evaluation:

Final grade = 100% Final test (final test grade must be equal or higher than 5)

Specifications for the resit/retake exam:

Final grade = 100% Final test (final test grade must be equal or higher than 5)

Specifications for the second resit $\ensuremath{/}\xspace$ retake exam:

Final grade = 100% Final test (final test grade must be equal or higher than 5)
