**4. Degree competences achieved in this course****Course competences**

Code	Description
1.2.1.II.01	Understand the basic principles and fundamental laws of experimental sciences (Physics, Chemistry, Biology and Geology).
1.2.1.II.02	Know the curriculum of Primary Education concerning these sciences.
CB01	Prove that they have acquired and understood knowledge in a subject area that derives from general secondary education and is appropriate to a level based on advanced course books, and includes updated and cutting-edge aspects of their field of knowledge.
CG09	Effectively deal with language learning in multicultural and plurilingual contexts. Encourage pupils to read and critically assess texts from different scientific and cultural domains within the school curriculum.

**5. Objectives or Learning Outcomes****Course learning outcomes****Description**

Recognize the historical Science-Technology-Society influence, assessing their importance and cultural significance.

Identify the location of the Earth and its movements in the Solar System, as well as its location in space.

Plan strategies for developing learning activities in the fields of Physics and Chemistry.

Assimilate the language and terminology of Physics and Chemistry, which would allow students to understand the main theoretical and practical paradigms of these experimental sciences.

Solve questions, exercises and problems related to the principles, laws and most important physicochemical theories.

Interpret the physicochemical phenomena that surround us in such a way to facilitate their future work as teachers.

Manage operations of physical quantities, units, and conversion systems.

**Additional outcomes****6. Units / Contents****Unit 1:**

**Unit 1.1**

**Unit 1.2**

**Unit 2:**
