5. Objectives or Learning Outcomes

Course learning outcomes

Description

To provide the student with the ability to apply graphic procedures to the representation of spaces and objects and to conceive and represent the visual attributes of objects and to master the proportion and techniques of drawing, including computer science.

Involve the student in the restlessness and knowledge of artistic action as a basis for the attitude to be learned and encouraged in project work.

To obtain an adequate knowledge applied to architecture and urban planning of spatial representation systems, the analysis and theory of the form and laws of visual perception, the techniques of graphic survey in all its phases, from the drawing of notes to the scientific restitution and basic knowledge of topography, hypsometry, cartography and techniques of land modification
