

1. General information

Course: COMPUTER ARCHITECTURE

Type: CORE COURSE

Degree: 347 - DEGREE PROGRAMME IN COMPUTER SCIENCE ENGINEERING (CR)

Center: 108 - SCHOOL OF COMPUTER SCIENCE OF C. REAL

Year: 3

Main language: English

Use of additional languages:

Web site:

Code: 42323

ECTS credits: 6

Academic year: 2022-23

Group(s): 20 21 22

Duration: First semester

Second language: Spanish

English Friendly: N

Bilingual: Y

Lecturer: JESÚS BLANCO RODRÍGUEZ DE GUZMAN - Group(s): 21

Building/Office	Department	Phone number	Email	Office hours
	TECNOLOGÍAS Y SISTEMAS DE INFORMACIÓN		Jesus.Blanco@uclm.es	

Lecturer: MARIA SOLEDAD ESCOLAR DIAZ - Group(s): 21

Building/Office	Department	Phone number	Email	Office hours
Fermin Caballero / 3.05	TECNOLOGÍAS Y SISTEMAS DE INFORMACIÓN	926052838	Soledad.Escolar@uclm.es	

Lecturer: FERNANDO RINCON CALLE - Group(s): 20 21 22

Building/Office	Department	Phone number	Email	Office hours
Fermin Caballero/3.03	TECNOLOGÍAS Y SISTEMAS DE INFORMACIÓN	6484	fernando.rincon@uclm.es	

Lecturer: JOSÉ ANTONIO DE LA TORRE LAS HERAS - Group(s): 21 22

Building/Office	Department	Phone number	Email	Office hours
Fermin Caballero / 3.14	TECNOLOGÍAS Y SISTEMAS DE INFORMACIÓN		JoseAntonio.Torre@uclm.es	

2. Pre-Requisites

Before taking this subject, you are supposed to have a good knowledge of the internals of a basic computer, as well as understanding how pipelining works, its advantages and drawbacks. It is also advisable that you are able to understand assembly code. more concretely we will assume that you are familiarized with the DLX/MIPS architecture.

Even without this prior knowledge you can still take the subject, but you should take into account the additional effort that it will imply. More concretely, you should review and study the program of Computer Structure (1st course) and Computer Organization (2nd Course). The Hennessy & Patterson book (included in the references) is also a good source of information to get this previous learning outcomes.

3. Justification in the curriculum, relation to other subjects and to the profession

This subject is part of the "Computing Engineering" block in the graduate degree. Here you will learn about the architectural concepts present in most current computers (from a laptop to a server in a data center). It provides the foundations for the following subjects: "Advanced Computer Architecture", "Operating Systems II", "Microprocessor based systems design" and "Information Systems Integration".

From the career point of view, the knowledge acquired should be useful to evaluate and select the most appropriate computing system for the concrete needs of a client. Furthermore, this type of know-how will also be useful for any company working on the development or integration of any type of computer system.

4. Degree competences achieved in this course

Course competences

Code	Description
CO01	Ability to design, develop, select, and assess, applications and digital systems, guaranteeing their reliability, security, and quality, according to ethical principles and the current and common laws.
CO08	Ability to analyse, design, build and maintain applications in a strong, safe, and efficient manner by selecting the most appropriate paradigms and programming languages.
CO09	Ability to know, understand, and assess the structure and architecture of computers, and their basic components.
INS01	Analysis, synthesis, and assessment skills.
INS04	Problem solving skills by the application of engineering techniques.
INS05	Argumentative skills to logically justify and explain decisions and opinions.
PER02	Ability to work in multidisciplinary teams.
PER04	Interpersonal relationship skills.
PER05	Acknowledgement of human diversity, equal rights, and cultural variety.

5. Objectives or Learning Outcomes

Course learning outcomes

Description

Knowledge of the structure of a CPU, identification of its functioning units, and explanation of their role in the execution of instructions.

Knowledge and identification of parallelisms at instruction level throughout segmentation and problems linked to it.

Understanding of the principles of computer architecture.

Identification of main types of architectures.

Knowledge of assessment techniques for computer performance.

Additional outcomes

- Understanding the concept of the programming model.

- Impact on performance of interactions between the programming model, programs coding and computer architecture.

- Understand the design of different types of ILP processors taking into account the relationships between technology, architecture, software, compilers, cost, power consumption, performance and market demands

6. Units / Contents

Unit 1: Introduction

Unit 2: Parallelism and Parallel Architectures

Unit 3: Superscalar Processors

Unit 4: Multiprocessor Architectures

Unit 5: Domain Specific Architectures

ADDITIONAL COMMENTS, REMARKS

Practical activities:

- Parallel programming of a multicore architecture. Measuring performance and understanding its relation with architecture, parallelism, coding and programming model.

7. Activities, Units/Modules and Methodology

Training Activity	Methodology	Related Competences (only degrees before RD 822/2021)	ECTS	Hours	As	Com	Description
Study and Exam Preparation [OFF-SITE]	Self-study	CO08 CO09	1.8	45	N	-	Self-study (EST)
Writing of reports or projects [OFF-SITE]	Self-study	CO01 CO08 CO09 INS01 INS04 PER02 PER05	0.9	22.5	Y	N	Preparation of essays on topics proposed by lecturer (RES)
Other off-site activity [OFF-SITE]	Practical or hands-on activities	CO01 CO08 CO09 INS01 INS04 PER02 PER04	0.9	22.5	N	-	Lab practical preparation (PLAB)
Class Attendance (theory) [ON-SITE]	Lectures	CO08 CO09	0.9	22.5	N	-	Teaching of the subject matter by lecturer (MAG).
Laboratory practice or sessions [ON-SITE]	Practical or hands-on activities	CO01 CO08 CO09 INS01 INS04	0.54	13.5	Y	Y	Realization of practicals in laboratory (LAB).
Problem solving and/or case studies [ON-SITE]	Problem solving and exercises	CO09 INS04 PER04	0.48	12	Y	N	Worked example problems and cases resolution by the lecturer and the students (PRO).
Individual tutoring sessions [ON-SITE]		CO08 CO09	0.18	4.5	N	-	Individual or small group tutoring (TUT).
Other on-site activities [ON-SITE]	Assessment tests	CO08 CO09 INS01 INS04 INS05	0.3	7.5	Y	Y	Final test of the complete syllabus of the subject (EVA)
Total:			6	150			
Total credits of in-class work: 2.4			Total class time hours: 60				
Total credits of out of class work: 3.6			Total hours of out of class work: 90				

As: Assessable training activity

Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

8. Evaluation criteria and Grading System

Evaluation System	Continuous assessment	Non-continuous evaluation*	Description
Final test	50.00%	50.00%	Compulsory activity that can be retaken (rescheduling) to be carried out within the planned exam dates of the final exam call (convocatoria ordinaria)
Laboratory sessions	25.00%	25.00%	Compulsory activity that can be retaken. It will be assessed by tests or projects.
Theoretical papers assessment	15.00%	15.00%	Non-compulsory activity that can be retaken. Elaboration of projects.
Other methods of assessment	10.00%	10.00%	Non-compulsory activity that can be retaken. Participation in forums and online training activities will be valued
Total:	100.00%	100.00%	

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences).

Evaluation criteria for the final exam:**Continuous assessment:**

In compulsory activities, a minimum mark of 40% is required in order to pass that activity and have the possibility to therefore pass the entire subject. The evaluation of the activities will be global and therefore must be quantified by means of a single mark. In the case of the activities that may be retaken (i.e., rescheduling), an alternative activity or test will be offered in the resit/retake exam call (convocatoria extraordinaria).

The final exam will be common for all the theory/laboratory groups of the subject and will be evaluated by the lecturers of the subject in a serial way, i.e., each part of the final exam will be evaluated by the same lecturer for all the students.

A student is considered to pass the subject if she/he obtains a minimum of 50 points out of 100, taking into account the points obtained in all the evaluable activities, and also has passed all the compulsory activities.

For students who do not pass the subject in the final exam call (convocatoria ordinaria), the marks of activities already passed will be conserved for the resit/retake exam call (convocatoria extraordinaria). If an activity is not recoverable, its assessment will be preserved for the resit/retake exam call (convocatoria extraordinaria) even if it has not been passed. In the case

of the passed recoverable activities, the student will have the opportunity to receive an alternative evaluation of those activities in the resit/retake exam call and, in that case, the final grade of the activity will correspond to the latter grade obtained.

The mark of the passed activities in any call, except for the final exam, will be conserved for the subsequent academic year at the request of the student, provided that mark is equal or greater than 50% and that the activities and evaluation criteria of the subject remain unchanged prior to the beginning of that academic year.

The failure of a student to attend the final exam will automatically result in her/him receiving a "Failure to attend" (no presentado). If the student has not passed any compulsory evaluation activity, the maximum final grade will be 40%.

Non-continuous evaluation:

Students may apply at the beginning of the semester for the non-continuous assessment mode.

In the same way, the student may change to the non-continuous evaluation mode as long as she/he has not participated during the teaching period in evaluable activities that together account for at least 50% of the total mark of the subject. If a student has reached this 50% of the total obtainable mark or the teaching period is over, she/he will be considered in continuous assessment without the possibility of changing to non-continuous evaluation mode.

Students who take the non-continuous evaluation mode will be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences), through the assessment systems indicated in the column "Non-continuous evaluation".

In the "non-continuous evaluation" mode, it is not compulsory to keep the mark obtained by the student in the activities or tests (progress test or partial test) taken in the continuous assessment mode.

Specifications for the resit/retake exam:

Evaluation tests will be conducted for all recoverable activities.

Specifications for the second resit / retake exam:

Same characteristics as the resit/retake exam call.

9. Assignments, course calendar and important dates	
Not related to the syllabus/contents	
Hours	hours
Study and Exam Preparation [AUTÓNOMA][Self-study]	45
Writing of reports or projects [AUTÓNOMA][Self-study]	22.5
Other off-site activity [AUTÓNOMA][Practical or hands-on activities]	22.5
Class Attendance (theory) [PRESENCIAL][Lectures]	22.5
Laboratory practice or sessions [PRESENCIAL][Practical or hands-on activities]	13.5
Problem solving and/or case studies [PRESENCIAL][Problem solving and exercises]	12
Individual tutoring sessions [PRESENCIAL][]	4.5
General comments about the planning: The subject is taught in 3 x 1,5 hour sessions per week	
Global activity	
Activities	hours
Individual tutoring sessions [PRESENCIAL][]	4.5
Study and Exam Preparation [AUTÓNOMA][Self-study]	45
Writing of reports or projects [AUTÓNOMA][Self-study]	22.5
Other off-site activity [AUTÓNOMA][Practical or hands-on activities]	22.5
Class Attendance (theory) [PRESENCIAL][Lectures]	22.5
Laboratory practice or sessions [PRESENCIAL][Practical or hands-on activities]	13.5
Problem solving and/or case studies [PRESENCIAL][Problem solving and exercises]	12
Total horas: 142.5
