4. Degree competences achieved in this course

Description

Code To have appropriate knowledge of the scientific and technological aspects of mathematical, analytical and numerical methods in

engineering, electrical engineering, energy engineering, chemical engineering, mechanical engineering, continuous medium

A01 mechanics industrial electronics, automation, manufacturing, materials, quantitative management methods, industrial computing, town

planning, infrastructures, etc.

A02 To plan, calculate and design products, processes, facilities and plants.

To conduct research, development and innovation in products, processes and methods. A04

A05 To perform strategic planning and apply it to construction, production and environmental quality and management systems. A06 To manage the technical and economic aspects of projects, installations, plants, companies and technology centres.

Knowledge, understanding and capacity to apply the required legislation in the industrial engineering profession A12

Knowledge and skills for the design and analysis of machines and heat engines, hydraulic machinery, and industrial heating and B05

cooling installations

CB06 Knowledge and skills to organise and manage enterprises.

CB09 Knowledge of financial and costs accounting.

CB10 Knowledge of information systems for management, industrial organisation, production, logistics and quality management systems.

D01 Ability to design, construct and exploit industrial plants.

Knowledge and abilities to plan and design electrical and fluid installations, lighting, heating and ventilation, energy saving and D04

efficiency, acoustics, communications, domotics, Smart buildings and security installations

D06 Knowledge and ability to perform verification and supervision of installations, processes and products.

D07 Knowledge and ability to conduct certifications, audits, verifications, trials and reports.

5. Objectives or Learning Outcomes

Course learning outcomes

Description

Acquire knowledge of the selection criteria for cooling fluids.

Be able to calculate thermal loads in industrial facilities and air conditioning tubes

Know how to make mass and energy balances in different cooling systems.

Be able to solve problems to determine psychrometic properties.

Acquire knowledge of the classification and design criteria of air conditioning systems.

Additional outcomes

6. Units / Contents

Unit 1: Cooling: history and classification

Unit 2: Refrigerants

Unit 3: Simple-compression refrigeration systems

Unit 4: Multiple-compression refrigeration systems

Unit 5: Absorption refrigeration systems

Unit 6: Ejection refrigeration systems

Unit 7: Expansion refrigeration systems

Unit 8: Refrigeration with specific effects

Unit 9: Components of refrigeration systems

Unit 10: Air conditioning systems

Unit 11: Psychrometric variables and charts

Unit 12: Psychrometric transformations

Unit 13: Thermal loads

Unit 14: Design of air ducts

As: Assessable training activity

Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

8. Evaluation criteria and Grading System						
Evaluation System	Continuous assessment	Non- continuous evaluation*	Description			
Laboratory sessions	30.00%	0.00%				
Final test	70.00%	100.00%				
Total	100.00%	100.00%				

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences).

Evaluation criteria for the final exam:

Continuous assessment:

The module has two blocks: the first about refrigerants and refrigeration systems and the second about air conditioning. A first exam will be made by the middle of the semester corresponding to the first block. The final exam will be composed of two parts, corresponding to the aforementioned blocks. Both parts will be weighted equally in the final score. A minimum mark of 4 (out of 10) is required in each part. The final score must be equal or above 5 (out of 10).

Non-continuous evaluation:

The module has two blocks: the first about refrigerants and refrigeration systems and the second about air conditionin. The final exam will be composed of two parts, corresponding to the aforementioned blocks. Each part will include questions about theory, problems and practicum. Both parts will be weighted equally in the final score. The final score must be equal or above 5 (out of 10).

Specifications for the resit/retake exam:

The same criteria as in the final exam will be applied

Specifications for the second resit / retake exam:

A single exam including all the contents will be made
