1. General information

Course: PROCESSES AND PRODUCTS INTEGRATED LABORATORY
Type: CORE COURSE
Degree: 344 - CHEMICAL ENGINEERING
Center: 1 - FACULTY OF SCIENCE AND CHEMICAL TECHNOLOGY
Year: 4

Main language: Spanish
Use of additional languages:
Web site:

Code: 57730
ECTS credits: 6
Academic year: 2023-24
Group(s): 21
Duration: C2
Second language: English
English Friendly: Y
Bilingual: N

2. Pre-Requisites

Not established

3. Justification in the curriculum, relation to other subjects and to the profession

This subject is the second of the two in which the matter is divided experimentation in chemical engineering. Its study is fundamental, since given its eminent practical character, the student has the opportunity to apply the theoretical knowledge previously acquired in other subjects, as well as integrate and use them jointly.

It also acquires skills in the management of equipment characteristic of the profession, especially in those designed on a pilot scale, a specific feature of this laboratory.

The implantation of this subject in the fourth course of the degree in chemical engineering assumes that the previous theoretical knowledge required in the same (mainly mass and energy balances, heat transmission and flow of fluids) have already been developed.

4. Degree competences achieved in this course

Course competences

Code	Description
E19	Knowledge about material and energy balances, biotechnology, material transfer, separation operations, chemical reaction engineering, reactor design, and recovery and transformation of raw materials and energy resources.
E20	Capacity for analysis, design, simulation and optimization of processes and products. Capacity for the design and management of applied experimentation procedures, especially for the determination of thermodynamic

E21	and transport properties, and modeling of phenomena and systems in the field of chemical engineering, systems with fluid flow, heat transfer, mass transference, kinetics of chemical reactions and reactors.
E22	Ability to design, manage and operate simulation, control and instrumentation procedures of chemical processes.
E26	Knowledge about integration of processes and operations
E40	Knowledge of the basic norms in matters of occupational health and safety, especially those that are applicable in the Industry and in the Chemical Laboratories
G01	Ability to write, sign and develop projects in the field of chemical engineering that are intended, according to the knowledge acquired as established in section 5 of order CIN / 351/2009 of February 9, construction, reform, repair, conservation, demolition, manufacture, installation, assembly or operation of: structures, mechanical equipment, energy installations, electrical and electronic installations, industrial facilities and processes and manufacturing and automation processes.
G02	Capacity for the direction, of the activities object of the engineering projects described in the competence G1.
G03	Knowledge in basic and technological subjects, which enables them to learn new methods and theories, and give them versatility to adapt to new situations.
G17	Capacity for critical thinking and decision making
G19	Capacity for teamwork
G22	Ability to apply theoretical knowledge to practice
G24	Leadership
G26	Obtaining skills in interpersonal relationships.

5. Objectives or Learning Outcomes

Course learning outcomes

Description

To be able to unify the knowledge acquired about Basic Operations, Fluid mechanics, Heat Transmission, Chemical Reaction Engineering, Separation Operations and Control and Instrumentation of the degree, and to apply them jointly.

To have the ability to handle equipment and facilities characteristic of the chemical industry, both at laboratory scale and pilot plant.

To practice in a practical way the knowledge acquired about Basic Operations, Fluid Flow, Heat Transmission, Chemical Reaction Engineering, Separation and Control and Instrumentation Operations.

6. Units / Contents

Unit 1: Distillation

Unit 2: Evaporation

Unit 3: Absorption

Unit 4: Chemical reaction

Unit 5: Filtration

Unit 6: Ultrafiltration

7. Activities, Units/Modules and Methodology

As: Assessable training activity

Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

8. Evaluation criteria and Grading System

Evaluation System	Continuous assessment	Non-continuous evaluation*	Description
Final test	45.00%	45.00%	
Assessment of active participation	55.00%	55.00%	
Total:	100.00%	100.00%	

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences).

Evaluation criteria for the final exam:

Continuous assessment:

In order to pass the subject, it will be required in each of the sections of the evaluation system a minimum mark of 4.0 over 10. The average mark must be

equal to or greater than 5.0 over 10.

Non-continuous evaluation:

In order to pass the subject, it will be required in each of the sections of the evaluation system a minimum mark of 4.0 over 10. The average mark must be equal to or greater than 5.0 over 10.

Specifications for the resit/retake exam:
