1. General information

Course: BRIDGE DESIGN

Type: CORE COURSE

Degree: 2343 - MASTERS DEGREE PROGRAMME IN ENGINEERING OF ROADS, CANALS AND PORTS

Center: 603 - E.T.S. CIVIL ENGINEERS OF CR

Year: 1

Main language: Spanish

Use of additional languages:

Web site:

Code: 310803

ECTS credits: 4.5

Academic year: 2023-24

Group(s): 20

Duration: C2

Second language: English

English Friendly: Y

Bilingual: N

Lecturer: JOSE ANTONIO LOZANO GALANT - Group(s): 20

2. Pre-Requisites

A basic knowledge of the following topics is advised: (1) Concrete and Steel structures, (2) Materials strength, (3) Calculation of structures.

3. Justification in the curriculum, relation to other subjects and to the profession

This subject provides the student the knowledge required to face a bridge design and construction.

4. Degree competences achieved in this course

Course competences

Code	Description
CB07	Apply the achieved knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to the area of study
G04	Knowledge of the history of civil engineering and ability to analyse and assess public works in particular and the construction industry in general.
G11	Capacity for the design, execution and inspection of structures (bridges, buildings, etc.), foundation works and underground civil works (tunnels, car parks), and the assessment of their integrity.
G27	Ability to communicate in a second language.
TE02	Knowledge and capacity for structural analysis through the application of methods and programmes for the design and advanced calculation of structures, based on the knowledge and understanding of loads and their application to structural typologies in civil engineering. Ability to perform structural integrity assessments.

5. Objectives or Learning Outcomes

Course learning outcomes

Description

Students can define the construction procedures for each of the types of bridges and building structures according to their design and materials.

Students determine the actions to be considered in the design of railroad bridges and highways, as well as in the design of building structures.

Students apply the most suitable calculation and structural analysis methods to obtain the integral response of the structure, as well as the different elements that compose it, for both static and dynamic actions applied.

6. Units / Contents

Unit 1: History of Bridges

Unit 2: Actions in bridges

Unit 3: Straight bridges

Unit 4: Box girder decks and slabs

Unit 5: Construction processes of bridges

Unit 6: Arch and frame bridges

Unit 7: Other bridge typologies

Unit 8: Technical vocabulary

7. Activities, Units/Modules and Methodology

As: Assessable training activity

Com: Training activity of compulsory overcoming (It will be essential to overcome both continuous and non-continuous assessment).

8. Evaluation criteria and Grading System			
Evaluation System	Continuous assessment	Non-continuous evaluation*	Description
Practicum and practical activities reports assessment	30.00%	0.00%	Assignment in groups. 25% report and 5% performance in classes. Not recoverable. Minimum grade 4.0.
Theoretical exam	70.00%	100.00%	The exams will preferably be done in person but if necessary virtual exams are also possible. Minimal grade 4.0. Recoverable in the extraordinary exam.
Total:	100.00%	100.00%	

According to art. 4 of the UCLM Student Evaluation Regulations, it must be provided to students who cannot regularly attend face-to-face training activities the passing of the subject, having the right (art. 12.2) to be globally graded, in 2 annual calls per subject, an ordinary and an extraordinary one (evaluating 100% of the competences).

Evaluation criteria for the final exam:

Continuous assessment:

- 1- Assignments in groups (TP)
 - 2- Exams (E). The exams will preferably be done in person but if necessary virtual exams are also possible.
- Grade: TPx0,3 + Ex0,7

The passed assignments will be considered for the following academic courses.

Non-continuous evaluation:

Unless stated otherwise, continuous evaluation criteria will be applied to all students. Anyone choosing non-continuous assessment must notify it to the lecturer within the class period of the subject. The option is only available if the student's participation in evaluation activities (from the continuous assessment) has not reached 50% of the total evaluation for the subject. For the retake exam, the assessment type used for the final exam will remain valid.

The evaluation will consist of one final exam (100% grade).

Specifications for the resit/retake exam:

- 1- Assignments in groups (TP)
 - 2- Exams (E). The exams will preferably be done in person but if necessary virtual exams are also possible.
- Grade: TPx0,3 + Ex0,7.

The passed exam or assignment in the continuous assessment are considered in this evaluation.

The passed assignments will be considered for the continuous assessment of the following course.

Specifications for the second resit / retake exam:

The same criteria of the non-continuous evaluation is applied.
